About This Course

Laser is changing the way traditional Dental Hygiene is viewed and practiced. This program will explore the value and benefit of Hygiene Laser assisted therapy that maximizes clinical end-point and the healing effect of the Laser. You will learn how laser debridement meets the demands in treating both Biofilm infection and the host-immunoinflammatory side of the periodontal infections through the absorption of light energy. Join in as we take this journey of scientific discovery that will shift your skills to another level of dependable and predictable healing through technologically advanced levels of patient care. Learn the specifics of laser fiber optic delivery and the nature of using a laser device through this hands-on clinical simulation program.

Upon Completion of this Course, participants should be able to do the following:

- Understand the science of laser wavelengths and their absorption characteristics.
- Discuss the key elements of laser safety.
- Explain how the Diode functions and produces the unique characteristics of laser energy.
- Identify how Diode laser energy interacts at all levels of the periodontal infections and why.
- Interpret laser tissue interaction and its correlation to power settings and the techniques used to obtain optimum clinical results.
- Discuss the healing effect of Diode Lasers.
- Explore new treatment designs for periodontal therapy that meet patient expectations of health and wellness.
- Recognize the numerous soft tissue procedures performed by lasers.

The course is approved by the Kentucky Board of Dentistry for the purposes of granting
